Asia Tactical: Tropical depression in Philippines reduced to LPA on December 19; remain cognizant of local updates

Current Situation:

- The **India** Meteorological Department (IMD) issued an orange alert, the second highest on a four-tier scale, for very heavy rains, thunderstorms, and lightning in coastal Andhra Pradesh and a yellow alert, the second lowest, for heavy rain, thunderstorms, and lightning in Rayalaseema due to a Low-Pressure Area (LPA) over the Bay of Bengal on December 19.

- The **Philippine** Atmospheric, Geophysical, and Astronomical Services Administration (PAGASA)

located Tropical Depression Querubin outside of the Philippines Area of Responsibility (PAR), and downgraded the weather system from a tropical depression to an LPA on December 19.

- The PAGASA forecast the LPA to bring scattered rains across the country on December 19. Scattered rain is also anticipated in the eastern portion of Southern Luzon, while the northeast monsoon will bring some rains to the rest of Luzon.
